

Smarter predictions to combat fouling. Intertrac Vision.

Fouling control is a complex challenge that demands more than just data - it requires reliability. That's where Intertrac® Vision comes in, powered by insights from over 200,000 dry dock events and 10,000 vessel operations. As the industry's first big data tool of its kind, it provides ship owners and operators with predictive insights into powering, speed, fuel consumption and the CO₂ saving potential of fouling control coatings, tailored to the operational profile of their vessel.

Propelling you forward.
